尖端创新技术 数码釉

超越品质采用全新纳米釉料
十度升级，质感至简。

清晰度 ➤ 通体度 ➤ 发色度 ➤ 耐磨度 ➤ 精细度 ➤
防滑度 ➤ 柔和度 ➤ 防污度 ➤ 调变度 ➤ 耐酸碱度 ➤

10MM / 20MM
全抛砖 岩石厚板

55MM / 12MM / 15MM / 18MM ★
薄板 岩板

吸水率 ≤ 0.1%

产品以天然陶土及绿色再生材料为主要原料，
1280℃高温煅烧而成。

具备低吸水率，多种厚度的瓷质通体砖。

专注多样化产品技术创新与应用延伸。

采用全通体技术，令砖体表里如一、致密无孔，

产品拥有破坏强度，耐磨度高，防滑性能强等优势。

全部采用一石多面工艺，多种产品品质选择。

(仿古面、酸洗面、辣焰面、柔抛面、干粒面、拉槽面、微光柔触面、半抛面、全抛面等)

产品应用场所：

机场、高铁、地铁、商业连锁、4S店、连锁酒店/咖啡厅、别墅群、地产中高端精装配套、停车场等。

products are mainly made of natural clay and green recycled materials.

Made by calcining at 1280°C.

Ceramic tile with low water absorption and various thickness.

focuses on technological innovation and application extension of diversified products.

The whole body technology is adopted to make the brick look the same inside and outside, compact and non-porous.

products have the advantages of destruction strength, high abrasion resistance, strong skid resistance and so on.

All adopt one stone multi - faceted process, a variety of product surface quality choice.

(Archaised surface, pickling surface, Zhen Stoneware surface, touchstone surface, dry grain surface, troughing surface, low light touch surface, half surface, full surface, etc.)

Product application places:

airport, high-speed rail, subway, commercial chain, 4S shop, chain hotel / coffee shop, villa group, medium and high-end hardbound supporting facilities of real estate, parking lot.

INSTALLATION INSTRUCTIONS (INDOOR)

安装指导 (室内)

1. 选择合适的工具 (用于安装的凹槽泥铲、吸盘和跨垫片、用于灌浆的橡胶泥铲) 至关重要。

1. Choosing the proper tools and implements(notched trowel rubber mallet, suction-cups and cross-spacers for instal ng ties, rubber trowel forgROUTING)is oftheutmost importance.

2. 要平铺的基材 (墙壁或地板) 必须完全平整, 在平面上没有缺陷。我们建议潮湿的地方事先防水, 粘结是厚度的不同会对瓷砖表面产生不同的应力, 从而导致瓷砖边缘的凸出。

2. The substrate(wall or floor) to be tiled must be perfectly level, with no defects in planarity.We recommend that damp areas be waterproofed beforehand.A difference in thickness in the adhesive layer wilproduce different stresses on the ceramic tile surface which will result in projecting tile edges.

3. 瓷砖表面必须完全没有灰尘或任何其他可能影响瓷砖附着力的物质。这将提高胶粘剂在基材上的粘结强度。

3. The surface to be tiled must be completely free of dust or any other substance that could negatively affect tile adhesion.This will promote better bondingstrengthof the adhesive on the substrate.

4. 在安装过程中, 应该有足够的光线让我们容易发现任何类型的缺陷, 特别是突出瓷砖边缘的外观。在这个阶段, 工作应该用更多的照明来完成, 而不是在工作完成后照亮该区域。聚光灯的使用将证明有助于这方面。

4. During installation, there should be enough light to allow us to easily spot any sort of defect, especially the appearance of projecting tile edges.During this phase, work should be performed with more lighting than that which willilluminate the area once the work is finished.The use of spotlights willprove helpfulin this regard.

5. 选择使用的胶粘剂类型是基础。我们必须考虑瓷砖的基材的特性 (砖、木、石膏、金属等的表面), 以及所选瓷砖的特性 (多孔墙砖、页岩砖或瓷砖)。

5. Selecting the type of adhesive to use is fundamental.We must take into account the properties of the substrate to be tiled(surface of brick, wood, plaster, metal, etc.), as well as the characteristics of the chosen ceramic tiles(porous wall tiles, stoneware tiles or porcelain tiles).

6. 建议薄床安装方法, 采用柔性胶粘剂。对于大于 31.6×31.6(1.000cm²) 的规格, 建议采用浮胶技术, 即在基板和砖的背面都涂上粘合剂。

6. The thin-bed installation method is recommended, with a flexible adhesive. For formats larger than 31.6×31.6(1.000cm²) the buttering-floating technique is recommended, that consists of applying the adhesive on both the substrate and the back of the tile.

7. 由于这些都是经过矫正的瓷砖, 所以需要小心处理, 以避免在瓷砖表面刮伤边缘、剥落或划痕。瓷砖指南“建议瓷砖的接缝宽度不要小于 1.5 毫米”之间的部分。

7. Being as these are rectified tiles, they require careful handling, to avoid ripped edges, chipping or scratches on the surface of tiles.The Ceramic Tile Guide"recommends that tiles not be installed with a joint width less than1.5mm. Between pieces.

8. 对于整流材料的安装, 建议跨垫片至少为 1mm 被使用。在乡村模型中, 建议的最小接缝为 3mm, 当矩形瓦交错布置时, 建议每隔 3/4 块安装。

8. For the installation of rectified materials, it is recommended that cross-spacers of atleast 1mm.be used.In rustic models the minimum joint recommended is3mm.It is recommended that rectangular tiles, when arranged in a staggered layout, be installed at 3/4th-piece intervals.

9. 安装停工时, 要记住, 已经安装的瓷砖已经收缩, 我们将要安装的瓷砖也会收缩。因此, 预测可能的移动是必要的, 因为如果我们继续在同样水平上铺砖, 随后的收缩可能会导致水平上的轻微差异。

9. During installation stoppages, it should be kept in mind that the tiles already installed have contracted, and those which we are going to install will experience the same movement. Therefore, it is necessary to predict the possible movement, since if we continue tiling on the same level, the subsequent contraction may give rise to a slight difference in level.

10. 建议您考虑加入周边关节, 这将有助于吸收任何活动后, 安装。这些接缝必须是空的, 或者用可压缩材料填充; 这些接缝的最小推荐宽度为 8 毫米。这种接缝是隐藏在踢脚板或瓷砖本身。

10. It is recommended that you consider the inclusion of perimeter joints, which will help to absorb any movements after installation.These joints must be left empty, or else filled with compressible material; the minimum recommended width for those joints is 8mm.This joints is concealed with the skirting or with the tile itself.

11. 如果衬底已经有自己的关节结构关节或分装, 这些瓷砖时应尊重安装, 必须记得最大的表面积覆盖看瓷砖没有分装关节的 50 m² 70 m² 内饰和外饰的一半大小。

11. If the substrate already has its own structural joints or dividing joints, these should be respected when ceramic tiles are install ed.It must be remembered that the maximum surface area to be covered with ceramic tiles without dividing joints is 50 m² to 70 m² for interiors and half that size for exteriors.

12. 在安装阶段, 在设置完全完成之前, 我们应该不断检查已经安装的零件, 因为还有时间来修复任何故障。橡皮锤可以用来敲下突出的瓷砖, 吸盘可以用来拉起多余的瓷砖。

12. During the installation phase, before setting has fully taken place, we should continuously check already installed pieces, since there is stilltime to fix any faults.A rubber mallet can be used to tap down projecting tiles and a suction-cup can be used to pull up pieces that are sunken excess.

13. 灌浆前应确保砖与砖之间的安装缝空, 无粘结材料, 无污垢、尘垢。任何中间物质除了阻碍浆液的粘附外, 还可能使安装接缝的效率降低。

13. Before grouting, it should be made sure that installation joints (between tile and tile) are empty and free of bonding materials and traces of dirt and grime.Any intermediary substance may make installation joints less effective, in addition to hindering the adhesion of the grout.

14. 瓷砖牢固地粘接在基板上后, 接缝处应灌浆。对于地砖的特殊情况, 应遵循制造商的建议, 以避免在地砖被行走或受到任何荷载之前有足够的时间过去。

14. Joints should be grouted once tiles are firmly bonded to the substrate.In the special case of floor tiles, the manufacturer' s recommendations should be followed, so as to enable enough time to elapse before tiles are walked on or subjected to any loads.

15. 灌浆材料应使用橡胶泥刀, 并应避免使用金属泥刀, 因为它们可能损害瓷砖的釉面。市场上有各种颜色的灌浆, 这使得它可以匹配任何设置创建的阴影。

15. The grouting material should be applied with a rubber trowel, and the use of metallic trowels should be avoided at all times, since they may damage the glazed surface of tiles.Grouts in a wide range of colours are available on the market, which make it possible to match the shade of any setting created.

16. 清除多余的灌浆材料应使用湿润的海绵进行。这一操作应及时进行, 因为如果灌浆材料与瓷砖的釉面接触时间过长, 就会妨碍清洁, 特别是在那些表面有浮雕的型号中。

16. Removing excess grouting material should be performed using a sponge dampened in water.This operation should be done in timely fashion, since if the grouting material is left in contact with the glazed surface of tiles for too long, it hinders cleaning, especially in those models the surface of which has relief.

17. 在建筑工程完成之前, 由于研磨材料的存在和工具的不断移动, 已经安装好的陶瓷地砖必须用正确的方法加以保护, 以防止可能的损坏。这不仅有助于保护瓷砖, 也将使后续清洗更容易。

17. It is absolutely necessary that already installed ceramic floor tiles be protected with the proper means so as to prevent possible damages until the building project is complete, due to the presence of abrasive materials and ongoing movement of tools.This will not only help to protect tiles, but it will also make subsequent cleaning easier.

18. 应避免使用含有氢氟酸 (HF) 的清洗剂 and 带有可能损伤瓷砖表面颗粒的固体洗涤剂。氢氟酸会彻底去除瓷砖釉面, 造成无法弥补的损害。

18. The use of cleaning agents that contain hydrofluoric acid (HF) and solid detergents with particles that may abrade the tile surface should be avoided. Hydrofluoric acid would completely remove the glazed surface of tiles, thus causing irreparable damage.

INSTALLATION INSTRUCTIONS (OUTDOOR)

安装指导 (户外)

1. 安装瓷砖时, 选择合适的工具非常重要 (切槽泥刀、橡胶槌、瓷砖垫片、橡胶泥刀、海绵等, 以便在注浆时达到最佳效果)。

1. When installing tiles, it is extremely important that you choose suitable tools and instruments(notched trowel, rubber mallet, tile spacers, rubber trowel, and sponge for optimum results when grouting).

2. 你必须设计和创造合适的排水斜坡, 以避免淤积问题和防止地表水积聚。

2. It is essential that you design and create suitable drainage slopes to avoid stagnation problems and prevent the build-up of surface water.

3. 确保地面防水, 防止地面水分渗透, 防止开花、苔藓等的形成。

3. Make sure that the ground is properly waterproofed to prevent ground moisture from filtering through and to protect against the formation of bloom, moss, etc.

4. 基板在厚度和表面光滑度方面必须紧凑, 任何易碎或容易脱落的部件都应该被移除。基板还必须没有灰尘、脂肪, 或任何其他可能干扰附着力的物质。最后, 确保表面完全均匀。在准备亚状态时, 必须维护之前创建的所有排水斜坡。

4. The substrate must be compact throughout in terms of thickness and surface finish, and any parts that are brittle or that could become easily detached should be removed. The substrate must also be free of dust, fat, or any other substances that could interfere with adhesion.Finally, make sure that the surface is completely even.All drainage slopes that you have previously created must be maintained when preparing the substrate.

5. 安装基材的尺寸和结构必须稳定, 并有足够的时间让基材发生干燥和凝固收缩。我们建议每一厘米的粘接剂留一星期。如果表面需要更早使用, 你可以考虑使用快速固化化合物。

5. The installation substrate must be stable in terms of dimension and structure, and sufficient time left for drying and setting shrinkage to occur. We recommend leaving one week for each centimetre of adhesive applied.If the surface needs to be used sooner, you might consider using a quick setting compound.

6. 提前正确规划要铺瓷砖区域的布局。在规划布局时, 要确定周边和中间伸缝的位置, 维护结构接缝, 不要在这些接缝上安装任何平头, 以免在安装后出现破损或开裂。

6. Correctly plan the layout of the area to be tiled in advance.When planning the layout, decide where to place perimeter and intermediate expansion joints, maintain structural joints, and do not install any tiler on these to prevent any breakage or cracking after installation.

7. 在室外容易结霜的地方, 必须覆盖好裂缝, 并按照欧洲标准 EN 12004(使用用胶粘剂) 使用 y 级 C2 水泥基胶粘剂来安装室外瓷砖。始终遵循制造商的指示, 以享受胶粘剂的性能提供的好处。

7. In outdoor areas prone to frost, the crack must be covered well and y class C2 cement-based adhesives as per European standard EN 12004(Adhesives for Ceramic Tiles) to install outdoor ceramic tiles.Follow the manufacturer' s instructions at all times to enjoy the full benefits offered by the adhesive' properties.

8. 使用薄层法有缺口的抹刀涂抹所有粘合剂。确保你的泥刀的大小与你将要安装的瓷砖的大小相适应。对于户外大规格瓷砖, 一般采用浮贴法, 即浮贴法。把粘合剂涂在衬底和瓷砖的底面上。

8. Apply all adhesives with a notched trowel using the thin-bed method.Make sure that the sizeof your trowel is suited to the sizeof the tiles you are installing. For outdoor or large-format tiles, always use the floating and buttering method, i.e. spread the adhesive over both the substrate and the underside of the tile.

9. 使用适合室外使用的灌浆砂浆 (符合 EN 13888- 瓷砖灌浆材料) 的 CG 2 级水泥基灌浆砂浆) 确保正确密封瓷砖接缝。对于需要更大弹性、附着力和机械阻力的应用, 我们建议将水泥基砂浆与特殊乳胶混合添加剂。

9. Ensure that you use tile joints properly by using a grouting mortar suited to outdoor use(Class CG 2 cementbased grouting mortars as per EN 13888 - Grouting Material for Ceramic Tiles). For applications requiring greater elasticity, adhesion, and mechanical resistance, we recommend mixing your cementbased mortar with a special latex additive.

10. 接缝的正确密封是铺砖过程中非常重要的一部分。室外的瓷砖不应该拼接在一起。瓷砖之间应留有 5 毫米的接缝, 尽管在温度急剧变化的区域可能会增加。灌浆前要确保所有接头都是干净的。

10. The correct sealing of joints is avery important part of the tiling process. Outdoor tiles should never be butted together.A joint of atleast 5 mm should be left between tiles although this can be increased in areas subject to sharp temperature changes.Make sure that alljoints are clean before groutingthem.

11. 在使用灌浆材料时, 请确保遵循制造商的说明。如果你使用的是防滑瓷砖或乳液型浆液, 请确保在浆液变干前清除所有痕迹。

11. Make sure that you follow the manufacturer' s instructions when applying the grouting material.If you are using anti slip tiles or a latex-based grout, make sure you cleanaway all traces of grout before it has time to dry.

12. 在所有情况下, 考虑周边关节的创建。这些应该在地砖和垂直元素 (如墙、柱子、基础块或其他类型的地板) 之间的所有过渡处创建。周边接缝的最小宽度应为 8 毫米。

12. In all cases, consider the creation of perimeter joints.These should be created at all transitions between floor tiles and vertical elements such as walls, pillars, foundation blocks, or other types of flooring.Perimeter joints should have a minimum width of 8 mm.

13. 所有楼层结构接缝的宽度和深度必须严格遵守。移动接缝对于保护瓷砖不受移动造成的损害至关重要, 无论是建筑的正常移动还是温度、湿度等变化引起的移动。

13. The width and depth of all floor structural joints must be strictly observed. Movement joints are critical to protecting ceramic tiles against damage caused by movements both normal building movements and movements caused by changes in temperature, moisture, etc.

14. 当填充移动接缝时, 不要使用吸收性、闭孔性、高压弹性或耐高温灌浆材料。密封接缝与高度弹性、防水材料是适合的宽度的接缝。这种密封胶还必须提供足够的机械和热阻。

14. When filling movement joints, do not use absorbent, closed-cell, high-compression, or temperature-resistantgrouting materials. Seal joints with a highly elastic, waterproof material that is suited to the width of the joint.This sealant must also offer sufficient mechanical and thermal resistance.

15. 中间伸缝接头必须在直径 9 米到 25 米之间的区域建造。这些接缝应形成一个正方形, 每条边长不超过 5 米。尽管如此, 关节宽度至少应保留 8 毫米。

15. Intermediate expansion joints must be created in areas measuring between 9 and 25 m.These joints should form a square with each side measuring no more than 5 m.A joint width of atleast 8mm should be left although this.

16. 瓷砖应经常在易结霜的室外区域使用 (这些瓷砖的吸水率低于 0.5%), 在霜冻期间, 不要让水在未灌浆的接缝处积聚, 因为循环的冻融会损坏瓷砖。

16. Porcelain tiles should always be used in outdoor areas prone to frost(these tiles have a water-absorption rate of under 0.5%). Do not allow water to accumulate in un grouted joints during frost periods as freezing-thawing cycles could damage the tiles.

17. 你可以通过选择防滑的瓷砖来提高潮湿地区的安全等级, 因为那里有滑动的风险。但是, 请记住, 这些瓷砖更难清洁 (它们更容易受到灰尘堆积的影响, 而灰尘通常更难清洁)。

17. It is absolutely necessary that already installed ceramic floor tiles be protected with the proper means so as to prevent possible damages until the building project is complete, due to the presence of abrasive materials and ongoing movement of tools.This will not only help to protect tiles, but it will also make subsequent cleaning easier.

18. 翻耕完成后, 确保及时去除所有的灌浆和粘合剂, 因为它们与瓦片表面接触的时间越长, 就越难去除。不要使用含有其他腐蚀性物质的氢氟酸清洗剂。

18. When finished tiling, make sure that you remove all traces of grout and adhesive promptly as the longer that these are in contact with the tiled surface, the more difficult they are to remove.Do not use cleaning agents containing fluor hydric acid of any other aggressive materials.
